1. Auckland Climate Grant Purpose

This is a targeted grant programme to support community-based climate action. The grant provides funding support for projects that:

- a. Reduce greenhouse gas emissions through community-based action
- b. Build community resilience to climate impacts
- c. Support Māori-led responses to climate change

In Aotearoa, household consumption of goods and services are producing 71 per cent of all emissions. Auckland's household emissions continue to rise at a higher rate than population growth, while concern over climate change grows. Many people feel overwhelmed, don't know how to take climate action and face barriers to reducing emissions.

Most Aucklanders (86 per cent) are willing to change their lifestyle to ensure we meet our climate commitments, with two in five willing to make radical change.

Reducing consumption emissions through empowering Aucklanders to make change at the individual and community level is a key strategy to reduce Auckland's overall emissions profile. A breakdown of New Zealand household consumption emissions, shown below, highlights the areas of highest emissions and greatest opportunity for reduction by communities are transport, food and energy (household utilities).

The Auckland Climate Grant programme will support community projects focused on providing resources, education, and opportunities that result in more Aucklanders engaging with climate change issues. It will support Aucklanders to make behaviour changes in areas with the greatest potential for reductions in greenhouse gas emissions.

Projects that support reductions in greenhouse gas emission will be the focus for the 2022/2023 funding allocations, with a target of 70 per cent of grants to be allocated to projects that primarily aim to respond to this measure. This allocation target will be reviewed annually.

The Auckland Climate Grant programme will also support projects that build community resilience to respond to the impacts of climate change. Resilience to climate-related impacts is defined as the ability to prepare for,

recover from, and adapt to significant impacts, such as more frequent and severe weather events, ocean warming and acidification, extended periods of drought and extreme temperatures, rising food prices caused by these impacts, and other deleterious effects of climate change.

Projects should focus on giving Aucklanders a voice in proactive community resilience planning and climate adaptation, particularly communities who will be the most vulnerable to climate impacts and have traditionally been under-served by the council. By building stronger connections between neighbours and within neighbourhoods, at key community sites, and with community-based organisations, projects can create resilience against climate-related stresses.

The Auckland Climate Grant programme will support projects that enable mana whenua and mātāwaka to respond to climate change. The allocation of funding will recognise the partnership between Council and Māori-led organisations – particularly mana whenua in Council's role as a partner under Te Tiriti.

2. Scope

Projects supported through the Auckland Climate Grant programme should meet one or more of the following criteria.

- results in activity that reduces greenhouse gas emissions or builds resilience to climate impacts
- supports mana whenua and mātāwaka to reduce carbon emissions and builds community resilience to climate-related impacts
- provides support and resources to Māori-led organisations and community groups to build organisational capacity and capability, develop strategic plans and develop sustainable funding models, increasing the total funding or support secured for climate projects in Auckland
- increases participation in climate action activity by communities who emit the most (generally, higher income communities) targeting the highest emitting behaviours
- increases participation in activities that build community resilience in under-served communities who most need our support to respond to climate impacts
- supports Aucklanders of different ages, abilities and ethnicities to take climate action.

3. Climate action activity areas

Projects supported through the Auckland Climate Grant should address one or more of the following climate action areas. Priorities for the Auckland Climate Grant are drawn from Te Tāruke-ā-Tāwhiri: Auckland's Climate Plan.

Future guidance on what types of activities we wish to support through these priorities can be found on Auckland Council's Live Lightly website, which provides advice and information for individuals and community groups on climate change: <https://livelightly.nz/>

3.1. Built environment and Energy

Projects that support a built environment and energy system that provides for a low carbon, climate disaster-resilient Auckland.

This could include:

- education and events to encourage the uptake of more efficient energy use by communities, use of renewable energy, and reduction in power costs for low-income Aucklanders

- education and events to encourage public uptake of sustainable design and construction practices
- education, events and resources to support retrofitting of non-Council community facilities such as community halls, marae or places of worship.

3.2. Transport

Projects that support low carbon, safe transport systems that deliver social, economic and health benefits for all. This will include innovative solutions that reduce the need for travel.

This could include:

- education, events and resources to encourage the use of public transport, walking, bicycles, e-bikes or electric scooters, rather than driving
- improve bicycle, e-bike or electric scooter parking and other end-of-trip facilities
- improve access to communal and personal bicycle, e-bike or electric scooters for low-income Aucklanders including bike hubs and bike loan programmes.

3.3. Communities

Projects that support communities to increase awareness of climate change and to prepare for changes in our climate and coastline. Projects that support Aucklanders to understand their carbon footprints and changes they can make to reduce these.

This could include:

- education, events and resources to engage communities and increase their awareness of current and future climate risks and consequences of hazards, and improve understanding of the implications of climate change
- education, events and resources to increase Aucklanders' awareness of climate change, to understand their carbon footprints and actions they could take to reduce these.
- skills development projects for communities related to resilience and climate action, including carbon literacy, energy advice and retrofitting
- education, events and resources to support early childhood centres, primary and secondary schools, kura and tertiary institutions to build awareness of climate changes, an understanding of carbon footprints and encourage action by students, their whānau and wider community
- support for behavioural change research, data collection, programme evaluation and sharing of success stories.

3.4. Food

Projects that support a low carbon, resilient, local food system that provides all Aucklanders with access to fresh, sustainable, affordable and healthy food and projects that support Aucklanders to make sustainable dietary choices. Projects will be prioritized that include element/s of dietary choice awareness, support or education

This could include:

- support Aucklanders to choose food grown regeneratively, including supporting regenerative urban agriculture, improving access to low carbon food growers or retailers
- support Aucklanders to access sustainable food that would otherwise be sent to landfill, for example, food rescue initiatives

- support large-scale (sub-regional) initiatives that provide Aucklanders with opportunities to grow their own food and connect with the environment and food provenance (for example, food forests, community supported agriculture)
- encourage Aucklanders to make dietary changes, reducing consumption of meat and dairy and eating more plant-based meals, more often.

3.5. Māori-led projects

Māori-led projects that build capacity to respond to climate impacts and support mana whenua and mātāwaka to reduce emissions and build community resilience.

Within the Auckland Climate Grants programme, Māori-led projects are those that:

- provide activities or opportunities for Māori individuals, whānau, hapū, iwi or other Māori communities to respond to climate impacts or build community resilience to climate impacts
- have a foundation in Te Ao Māori philosophy and principles, and apply Māori language
- the applicant groups or project leaders are predominantly Māori.

This could include:

- projects that build capacity for Māori-led groups to develop climate action plans and potential climate action activities
- projects to restore, rejuvenate and replenish mahinga kai (food production), and enable indigenous food sovereignty
- project that address electricity supply issues and support marae to act as emergency hubs in their rohe for natural disasters
- educational projects to support intergenerational mātauranga on climate change, and prepare and empower Māori communities for the transition
- projects that support the identification and protection of sites of cultural heritage impacted by climate change.

3.6. 2022/2023 Climate action activity priorities

For the 2022/2023 funding round, priority will be given to application in these areas:

- Transport
- Energy
- Food
- Māori-led projects

Priority areas are updated on an annual basis.

4. Exclusions

Costs outlined in the Auckland Council Community Grants Policy as exclusions will not be supported through the Auckland Climate Grant programme: These include:

- debt servicing or repayment
- legal expenses
- activities that promote religious ministry or political purposes

- medical expenses
- public services that are the responsibility of central government (e.g. core education, primary health care)
- physical works, e.g. improvements to community buildings that require consents or permits, prior to the necessary consents or permits being obtained (grants may be awarded in principle, but funds will not be released until all conditions are satisfied)
- purchase of alcohol
- travel and accommodation outside Auckland
- retrospective costs (where the activity has already taken place), unless this is necessary as a condition of the grant, or we are satisfied there are other mitigating circumstances
- fundraising events or activities, especially where the beneficiary is a third party.

Specific exclusions for the Auckland Climate Grant programme include:

- climate action projects focused on the natural environment, industry and the economy are out of scope for the Auckland Climate Grant programme
- projects with a primary focus on food waste, composting or recycling should apply through the Waste Minimisation and Innovation Fund
- activities whose primary purpose is the private gain or advancing of private business interests without a significant public good component
- purchase of vehicles and any related ongoing maintenance, repair, overhead costs or road user charges
- conference fees and costs
- funding for existing roles or organisational costs
- subscription services where these are ongoing and not associated with a specific event or outcome
- replication of council services
- projects with a primary focus on creation of websites and electronic platforms.

5. Applicants

Applicants to the Auckland Climate Grant programme can include:

- community groups
- neighbourhoods
- mana whenua and mātāwaka applicants
- social enterprises
- businesses and Business Improvement Districts (BIDs)
- education providers (early childhood centres, schools, kura and tertiary institutions).

6. What can be applied for?

Grants of between \$1,000 and \$50,000 are offered through the Auckland Climate Grant programme with both response grants and strategic grants offered.

6.1. Response grants

The Auckland Climate Grant programme seeks to grow community participation in climate action, and amplify existing community action, particularly among under-served communities such as youth, Pacific peoples, marae, and rangatahi Māori. This will be achieved through connection with other council programmes, including our local

board climate activators, Mātātahi Taiao (rangatahi Māori) climate change projects, sustainable and resilient marae projects and regional community climate catalysts, and will respond to emerging opportunities. Response grants are one-off grants open to applications from groups who have not previously engaged with climate action activity, are rapidly building capacity in this area or have historically been under-served by Auckland Council grant processes.

Applicants can apply for climate action response grants between \$1,000 and \$15,000, with allocation decisions made by the General Manager Environmental Services.

6.2. Strategic grants

Applicants can apply for strategic grants between \$15,000 and \$50,000, to support programmes and activities aligning with the Auckland Climate Grant programme purpose, scope and priority actions, that occur within the Auckland region. Allocation decisions for strategic grants are made by the Environment and Climate Change Committee. Strategic grants will be expected to have more significant impacts than response grants and could potentially be used to either expand best practise projects or develop innovative new responses to the climate challenge.

6.3. Funding timeframe and multi-year grants

The funding timeframe for projects is, in general, one to three years, after which the project objectives should either have been achieved, the project should be directly funded by Auckland Council through a non-contestable process, or the project has become self-funding.

Multi-year applications can be made for strategic grants requesting funding for up to three years.

7. Funding rounds

	Opening date	Closing date	Funding decisions
Response grants			
Round One	26 September 2022	31 October 2022	November 2022
Round Two	31 January 2023	4 March 2023	April 2023
Round Three	3 April 2023	5 May 2023	June 2023
Strategic grants			
Annual round	26 September 2022	31 October 2022	December 2022

8. How to apply

The Auckland Climate Grant operates as a contestable process. This means:

- applicants are invited to apply for a grant during scheduled funding rounds, with publicly advertised opening and closing dates
- clearly defined processes will be applied to all applications
- final allocation decisions will be published in a public forum.

8.1. Preparing your application

All applications must be submitted using the SmartyGrants online system. Applications for response grants do not need to be written; audio, video or image files can be submitted.

Support is available with the application process. Please contact Fran Hayton on frances.hayton@aucklandcouncil.govt.nz or 09 890 4060

Key application requirements:

- Please complete all of the application form.
- You will be asked to explain how your project or activity contributes towards fund outcomes.
- You will be asked to attach quotes in your project budget to substantiate costs you are requesting funding to support.
- You will be asked to attach bank account details if you have not received a grant payment from Auckland Council in the last 12 months.
- In general, Council funding should not be regarded as the sole funding source for your activity. In most instances applications that can demonstrate a 50% contribution towards project costs from other sources of funding or in-kind contributions are preferred..

8.2. Disclosure of Interest

All applicants must disclose if an Auckland Council councillor, local board member or council employee has any interest or involvement in the activity for which they are seeking a grant. You will be asked this question in the application form.

8.3. Application assessment

All eligible applications will be assessed against the assessment criteria below. This application assessment will be the basis of funding recommendations presented to the General Manager Environment Services

1. Alignment with grant purpose – greenhouse gas emissions reduction, resilience to climate impacts and support for mana whenua and mātāwaka-led projects
2. Māori outcomes
3. Unmet community need and project reach
4. Collaboration with other groups, schools, mana whenua or organisations
5. Likelihood of success.

8.4. Notification of decisions

Once allocation decisions are made by the General Manager Environmental Services, all applicants will be notified of the outcome of their application by email.

If your application is not successful, a reason will be provided by council staff where possible and suggestions provided for future grant applications.

If your application is successful you will receive a funding agreement, which is a formal document that outlines the conditions of the grant and our accountability reporting requirements. Grant recipients are required to sign these agreements and return them to the council to receive funding.

8.5. Meeting our accountability requirements

Accountability and reporting requirements are specified in the funding agreement between Council and the successful grant recipient. The accountability and reporting requirements may include:

- Evidence of the project's financial and non-financial inputs and outputs, a description of the activities delivered, measures and outcomes achieved and the likely long-term impact of the project
- Financial summary of project costs and income, evidence and findings of surveys, participant questionnaires and project evaluation, challenges, highlights and learnings.

8.6. Contact
